Performance insights

GRADE	SUGGESTION	
F 0	Combine external JavaScript	▼
F 0	Combine external CSS	▼
F 0	Parallelize downloads across hostnames	▼
D 60	Serve static content from a cookieless domain	▼
D 66	Remove query strings from static resources	▼
A 98	Leverage browser caching	▼
A 100	Minimize request size	▼
A 100	Minimize DNS lookups	▼
A 100	Minimize redirects	▼
A 100	Avoid bad requests	▼
A 100	Specify a cache validator	▼
A 100	Specify a Vary: Accept-Encoding header	▼

State Colors

The following colors are used in the waterfall chart to indicate the different stages of a request.

	DNS	Web browser is looking up DNS information
	SSL	Web browser is performing a SSL handshake
	Connect	Web browser is connecting to the server
	Send	Web browser is sending data to the server
	Wait	Web browser is waiting for data from the server
	Receive	Web browser is receiving data from the server

Content Types

The following icons are used to indicate different content types.

	HTML	HTML document
	JavaScript	JavaScript file
	CSS	CSS file
	Image	Image file
	Text/plain	Plain text document
	Other	Any other content type, for example flash files
	Warning	The request got a 4XX, 5XX response or couldn't be loaded
	Redirect	The request got a 3XX response and was redirected

Server Response Codes

To make it easy for you to differentiate between the HTTP response codes in the waterfall chart, we've color-coded the text and background of each URL.

URL	2xx	The server responded with a successful code
URL	3xx	The request was redirected to another target
URL	4xx	A client error occurred, for example 404 page not found
URL	5xx	A server error occurred, for example 500 internal server error
URL	Error	Connection error, no response from the server

About Pingdom

Pingdom offers cost-effective and reliable uptime and performance monitoring for your websites. We use more than 70 global polling locations to test and verify our customers' sites 24/7, all year long. With Pingdom you can monitor your website's uptime, performance, and interactions for a better end-user-experience. Your customers will thank you.

Nobody Likes a Slow Website – We built this Website Speed Test to help you analyze the load speed of your websites and learn how to make them faster. It lets you identify what about a web page is fast, slow, too big, what best practices you're not following, and so on. We have tried to make it useful both to experts and novices alike.

In short, we wanted it to be a easy-to-use tool to help webmasters and web developers everywhere optimize the performance of their websites.

Feature Overview

Examine all parts of a web page – View file sizes, load times, and other details about every single element of a web page (HTML, JavaScript and CSS files, images, etc.). You can sort and filter this list in different ways to identify performance bottlenecks.

Performance overview – We automatically put together plenty of performance-related statistics for you based on the test result

Performance grade and tips – See how your website conforms to performance best practices from Google Page Speed (similar to Yahoo's Yslow). You can get some great tips on how to speed up your website this way.

Trace your performance history – We save each test for you so you can review it later and also see how things change over time (with pretty charts!).

Test from multiple locations – See how fast a website loads in Europe, the United States, etc.

Share your results – We've made it easy for you to perform a test and share it with your friends, work colleagues or web host.

How it works

All tests are done with real web browsers, so the results match the end-user experience exactly. We use a bunch of instances of Google's Chrome web browser to load websites, record performance data, and so on. Tests are done from dedicated Pingdom servers.
